Proposed Project Description

We propose creating a Job Applicant Tracking System (ATS) which will streamline the recruiting process by helping manage job applications, candidate data, and hiring workflows for candidates and employers alike. The system will serve as a central platform for companies to post jobs and manage potential employees from start to finish.

The project will support job application intake, candidate evaluation, interview scheduling, and offer management. It will streamline the recruiting process for HR teams and simplify the process for job seekers.

System Users

- Job Applicants
- Recruiters
- Interviewers
- Hiring Manager

Functionalities by User Type

Job Applicants

- Create a personal profile
- Upload resume
- Browse job postings
- Apply to job postings
- Track the status of submitted applications
- Receive notifications about application progress
- Withdraw applications if desired
- Accept offer letters

Recruiters

- Post and manage job openings
- Filter applicants by criteria (years of experience, skills, etc.)
- Shortlist candidates
- Schedule interviews
- Manage interviews (reschedule, cancel, etc.)
- Manage offer letters

Interviewers

- View applicant profiles
- View upcoming interviews
- View applicant resumes
- Submit feedback on candidates after interviews
- Approve or reject candidates at different stages

Hiring Manager

- Review shortlisted candidates
- Select candidates to interview
- Submit feedback on candidates after interviews
- Approve or reject candidates at different stages

Real-World Entities

- Job Applicant
- Recruiter
- Interviewer
- Hiring Manager
- Job Posting
- Resume
- Candidate Profile
- Application Form
- Interview Schedule
- Feedback form
- Offers
- Notifications
